1 Feature Purpose

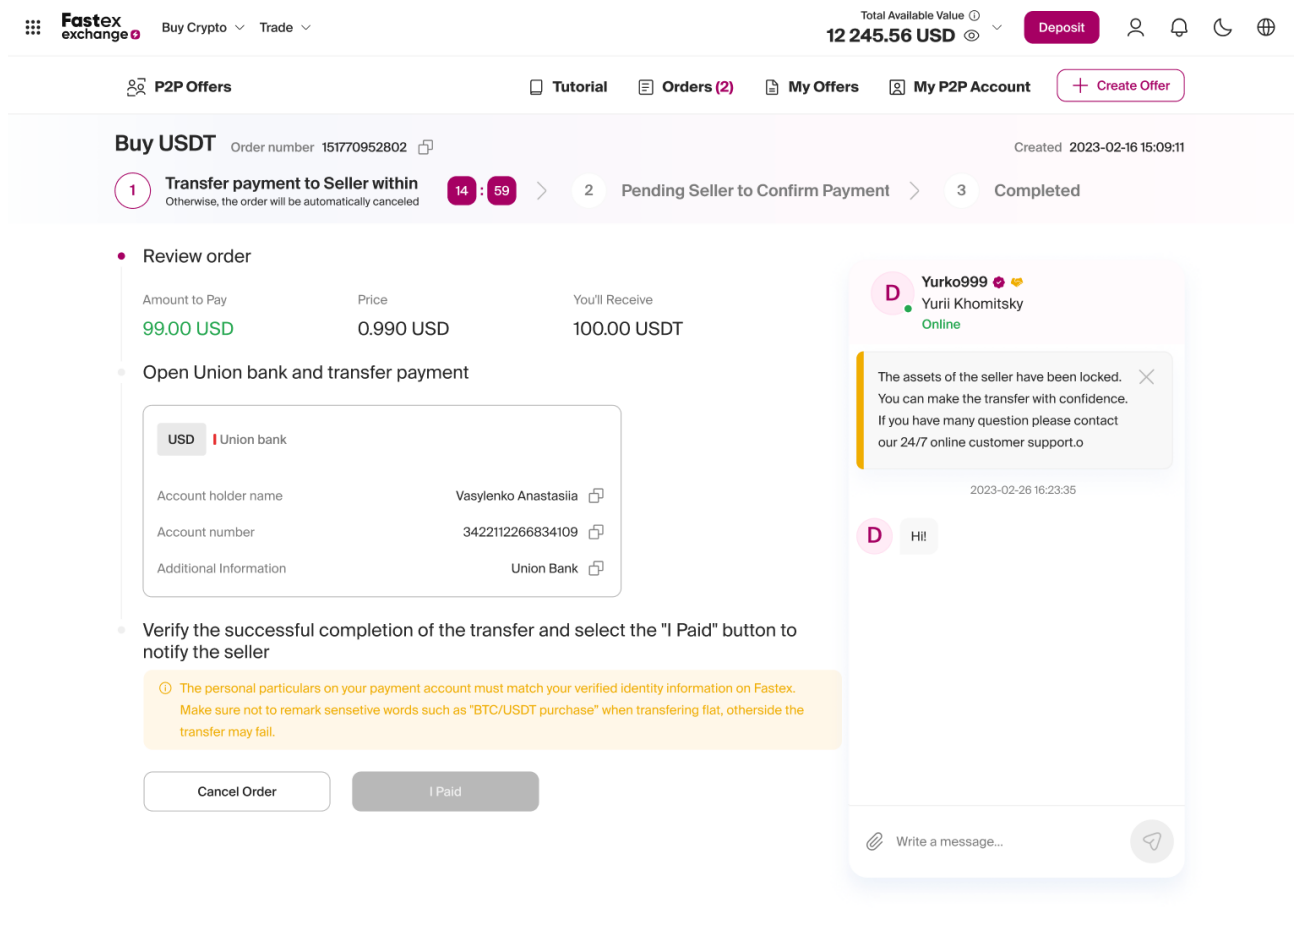

Both buyer and seller of a P2P order, should be able to communicate with their counterparty in chat when an order is created, so that they can inform them about their online status, discuss payment details, and reduce cancellations and appeals due to misunderstandings.

2 Feature Description

A chat feature is displayed on the **'Order'** page, allowing you to send messages to the counterparty from 1 character (or attachment) up to 800 characters long. When you send messages, you can see your counterparty's real first and last name from the KYC, displayed under the counterparty's username in the chat box, and your counterparty can see yours. Also, after the buyer marks the order as "I paid, notify the seller," the text message for the seller on the **Confirm Payment** page shows the buyer's full name from KYC instead of their nickname.

Please, note!

If there is no full name in the database, **"unknown name"** is displayed.

Hi!

Write a message...

Fastex
exchange

When you are logged in but not on the '**Order**' page, you will receive notifications from chat if the counterparty or customer support representative sends a message.

The chat is connected to a notification service that sends email notifications if the you are offline and mobile notifications when P2P is available on the mobile app.

Administrators can access order information and open a chat widget to view all messages between the buyer and seller. They can also send messages in the chat, displaying their first name and admin ID, e.g., '*Customer Support: John #23231.*'

Chat history is stored in a database and accessible by customer support.

2.1 Sending Photo and Video Files in the Chat

The chat feature also allows attaching files for added convenience.

Sellers and buyers can send both photos and videos via the chat:

- Click on the **Attachment** icon.
- Select a file.
- Press the system button **Send**.

Now, the file is sent and displayed for both users in the chat.

Supported file formats:

- **Photo:** JPG, JPEG, PNG, PDF.
- **Video:** .mp4, .avi, .mov, .mkv, .wmv, .mov, .webm, .3gp.

 Please, note!

Files of other formats are not allowed

Maximum file sizes:

- **Video:** 150 MB
- **Photo:** 20 MB

 Please, note!

Files exceeding the maximum size are not allowed.

The time of sending a photo or video is displayed in the chat.

Users can view photos and videos directly in the chat.

The [order status change messages](#)¹ are also displayed in the chat.

2.2 Messenger Service Workflow

- **Initial Check:** The client checks their local cache for any tokens.
- **Token Validation:** If valid tokens are found, the client proceeds to the messenger using the session token.
- **Token Expiry:** If the session token has expired, the client uses the refresh token to obtain a new session token.
- **Refresh Token Expiry:** If the refresh token has also expired, the client makes a request to the P2P service to obtain new tokens.
- **Empty Local Storage:** If the local storage is empty, the client makes a request to the P2P service to obtain new tokens.
