1 Introduction to the Business Dashboard User Guide

The **Business Dashboard User Guide** is designed to help you understand and effectively use all the features and metrics provided by the dashboard. Whether you're focusing on financial performance, user engagement, marketing campaigns, or operational efficiency, this guide will walk you through every dashboard aspect, offering insights and practical tips.

IMPORTANT NOTES ABOUT SYSTEM BEHAVIOR

Before diving into the specific features and functionality, it's essential to understand two key aspects of how the system operates:

- **Time Zone Alignment:** All metrics displayed in the dashboard are calculated based on your (partner's) time zone. To ensure consistency and accuracy, make sure the dashboard's time zone matches the settings configured in your BackOffice.
- **Daily Updates:** The dashboard is refreshed once daily, early in the morning (UTC+0), providing you with the most up-to-date data for informed decision-making.

These system behaviors are fundamental to maintaining accurate and actionable insights, so please remember them as you use the dashboard.

2 Getting Started

2.1 Login

- Access the dashboard with your provided credentials.
- Ensure your timezone settings in BackOffice align with the dashboard to avoid discrepancies in metrics.

2.2 Navigation

- The dashboard consists of tabs. Each tab represents a key area of business analytics.
- Use the filter panel at the top of each tab to narrow data by date range, product (Casino or Sportsbook), or other relevant criteria.

3 Overview of the Dashboard Structure

The Business Dashboard is organized into several tabs, each tailored to a specific area of analysis. Here's a quick overview of the sections:

- **3.1** Sections available for all **payment** plans (Basic, Advanced, and Premium)

1. **Finance:** Monitor financial metrics such as deposits, withdrawals, and overall transaction trends. This section also breaks down financial activity by payment systems.
2. **Bets:** Analyze betting activity, including the volume of bets, GGR (Gross Gaming Revenue), and the number of active players during the reporting period.
3. **Attraction:** Gain insights into user acquisition, with metrics such as registrations, first-time deposits, and user retention over time.

- **3.2** Sections available for Advanced and Premium payment plans

1. **Web Analytics:** Evaluate your digital marketing performance by tracking sessions, registrations, conversion rates, and more, segmented by traffic source.
2. **Casino Details:** Dive deep into casino activity, tracking metrics such as turnover, winnings, and GGR by product, provider, and game.
3. **Sportsbook Details:** Examine sportsbook performance at a granular level, including metrics aggregated by sport, region, and match.
4. **CRM Campaigns:** Assess the effectiveness of CRM campaigns, tracking engagement metrics like opens, clicks, and revenue generated after campaign interactions.
5. **Bonuses:** Evaluate the performance of bonuses, with detailed breakdowns of bonus costs, contributions to GGR, and trends over time.

4 What's Inside This Guide

In the following sections, we'll take a closer look at each dashboard tab. For each section, you'll find:

- **Detailed Explanations of Metrics:** Understand how each metric is calculated and what it represents.
- **Scenarios for Effective Use:** Learn how to apply the data to achieve specific business goals, whether it's optimizing marketing spend, improving player retention, or identifying top-performing campaigns.
- **Pro Tips for Maximizing Results:** Gain actionable insights on how to use the dashboard data to make informed, strategic decisions.

5 Dashboard description

The **Business Dashboard** is a dynamic and interactive tool designed for deep data exploration and actionable insights. The dashboard's capabilities leverage the Tableau platform, ensuring scalability and advanced visualization features. With its structured layout, multiple panels, and intuitive navigation, it allows users to analyze complex metrics in a streamlined manner, providing real-time updates and advanced filtering capabilities.

5.1 Subscription Plans and Access

The Business Dashboard offers tiered subscription plans tailored to different business needs. Each package includes specific features and access limitations:

1. **Basic Package:**
 - Access to the main Tableau dashboard with key metrics.
 - Dashboard access for **up to 3 users**.
2. **Advanced Package:**
 - Access to the main Tableau dashboard with key metrics.
 - **Two additional tabs** with extended information on Casino and Sportsbook.
 - Web analytics, including the effectiveness of advertising channels.
 - Analytics of CRM campaigns.
 - Dashboard access for **up to 5 users**.
3. **Premium Package:**
 - Access to the main Tableau dashboard with key metrics.
 - **Two additional tabs** with extended information on Casino and Sportsbook.
 - Web analytics, including the effectiveness of advertising channels.
 - Analytics of CRM campaigns.
 - Dashboard access for **up to 7 users**.
 - **20 hours per month** of BetConstruct analysts' time, which can be spent on consulting, customizations, and dashboard enhancements.

5.2 Interactive filtering

The dashboard provides a highly interactive filtering feature that allows you to explore data dynamically across all panels on all the tabs. By selecting a specific value, range, or data point on any chart or graph (for example, clicking or highlighting a portion of a bar chart), the other panels on the dashboard automatically

adjust to display data related to your selection. This feature makes it easier to analyze relationships between different metrics in real time.

How It Works:

- Click on a single value or highlight a range of data to focus on specific metrics.
- When you make a selection, all panels on the dashboard are instantly updated to reflect data filtered by your chosen criteria.
- Whether you're focusing on a single day, a particular product, or a specific bonus type, the dashboard adjusts to help you dive deeper into the data.

This interactive filtering ensures a smoother, more intuitive data exploration process, helping you quickly identify patterns, trends, and opportunities without the need for complex configurations.

5.3 Exclude and Keep Only Options

- **Exclude:** Remove unwanted values or ranges by selecting them and applying the "Exclude" option. This dynamically updates all panels to exclude the chosen data.
- **Keep Only:** Isolate values or ranges by selecting them and applying the "Keep Only" option. This filters the dashboard to display only the selected data.

These tools allow for precise, focused analysis tailored to your specific needs.

5.4 Upper Panel Functionalities

The upper panel provides essential navigation and customization options for managing the dashboard efficiently:

- **Undo/Redo:**
Quickly reverse or reapply recent actions, ensuring you can experiment with data exploration without losing progress.
- **Reset View:**
Clears all applied filters, returning the dashboard to its default view. This is helpful when starting a new analysis or after narrowing down data too much.

- **Refresh Data:**
Updates the dashboard data to either the latest available information or faster accelerated data, ensuring insights are always relevant.
- **Replay Animation:**
Replays visualizations or animations to observe data trends and patterns over time.
- **Save Custom View:**
Creates a personalized dashboard layout by saving specific configurations and filters for reuse.
- **Add to Favourites:**
Marks specific dashboards, tabs, or views for quick access later.
- **Search:**
Locates specific metrics, dashboards, or data points quickly across the system.
- **Show/Hide Favourites Menu:**
Toggles the display of the favourites menu to streamline navigation or access frequently used views.
- **Notifications:**
Displays important alerts, updates, or changes related to the dashboard, keeping you informed without interrupting your workflow.
- **Metrics:**
Displays a summary of key performance indicators (KPIs) available on the dashboard, making it easy to monitor critical metrics.
- **Export/Download:**
Enables downloading data or visualizations in various formats (image, data, Crosstab, PDF, PowerPoint) for external analysis or reporting.
- **Full Screen/View Options:**
Switch to a full-screen mode or toggle different visualization options for a more tailored experience.
- **Share:**
Enables collaboration by allowing you to share the dashboard with colleagues or stakeholders who are included within your payment plan's access limits.

The **Business Dashboard** is designed to provide actionable insights through its intuitive interface and robust tools, empowering users to identify opportunities, analyze trends, and make data-driven decisions efficiently.

6 Sections description

6.1 FINANCE

This section is available for **all payment plans** (Basic, Advanced, and Premium), and provides insights into clients' financial activities, including deposits, withdrawals, and their relationships.

6.1.1 Filtering

On the "**Finance**" tab, you can filter data within a specific range by selecting from predefined periods such as '**Last 30 days**' or customizing the range by choosing specific days, weeks, or months and their durations.

The dashboard updates instantly upon selection, ensuring you always view the most relevant data based on your criteria.

The chart legend clearly distinguishes deposits (blue) from withdrawals (orange), allowing you to quickly identify trends and patterns at a glance.

6.1.2 Panels and Metrics

Panel Name	Description	Metric	Formula	Additional explanations (optional)
Deposits & Withdrawals	Displays the total amounts of deposits and withdrawals, as well as the difference between them.	Deposits	SUM(DepositAmount)	--
		Withdrawals	SUM(WithdrawalAmount)	By date when the client received the money.

	Difference	SUM(DepositAmount) - SUM(WithdrawalAmount)	--																																																						
Deposits & Withdrawals <table><tr><th>Date</th><th>Deposits (€)</th><th>Withdrawals (€)</th></tr><tr><td>27 Oct</td><td>552,050</td><td>457,845</td></tr><tr><td>28 Oct</td><td>472,167</td><td>402,706</td></tr><tr><td>29 Oct</td><td>488,757</td><td>367,851</td></tr><tr><td>30 Oct</td><td>556,574</td><td>353,030</td></tr><tr><td>31 Oct</td><td>506,027</td><td>459,270</td></tr><tr><td>1 Nov</td><td>597,366</td><td>434,239</td></tr><tr><td>2 Nov</td><td>692,697</td><td>988,698</td></tr><tr><td>3 Nov</td><td>614,182</td><td>586,974</td></tr><tr><td>4 Nov</td><td>601,159</td><td>506,627</td></tr><tr><td>5 Nov</td><td>662,067</td><td>479,907</td></tr><tr><td>6 Nov</td><td>669,377</td><td>552,111</td></tr><tr><td>7 Nov</td><td>686,238</td><td>502,245</td></tr><tr><td>8 Nov</td><td>645,718</td><td>575,115</td></tr><tr><td>9 Nov</td><td>751,500</td><td>553,119</td></tr><tr><td>10 Nov</td><td>574,276</td><td>503,388</td></tr><tr><td>11 Nov</td><td>631,798</td><td>539,875</td></tr><tr><td>12 Nov</td><td>519,057</td><td>404,404</td></tr></table> € 10,186,609 deposits € 8,301,804 withdrawals € 1,884,805 difference				Date	Deposits (€)	Withdrawals (€)	27 Oct	552,050	457,845	28 Oct	472,167	402,706	29 Oct	488,757	367,851	30 Oct	556,574	353,030	31 Oct	506,027	459,270	1 Nov	597,366	434,239	2 Nov	692,697	988,698	3 Nov	614,182	586,974	4 Nov	601,159	506,627	5 Nov	662,067	479,907	6 Nov	669,377	552,111	7 Nov	686,238	502,245	8 Nov	645,718	575,115	9 Nov	751,500	553,119	10 Nov	574,276	503,388	11 Nov	631,798	539,875	12 Nov	519,057	404,404

12 Nov	519,057	404,404																																																							
How to Use: - Observe total deposits and withdrawals to identify cash flow trends. - Check the "Difference" metric to track net revenue.																																																									
Pro Tips: - Identify profitable periods by tracking spikes in deposit activity. Use this data to schedule promotions and bonuses when deposits are already trending upward to amplify engagement. - Monitor the "Difference" metric regularly to identify imbalances between deposits and withdrawals. A high withdrawal-to-deposit ratio may indicate issues with player satisfaction or bonuses that are too generous.																																																									

Max daily deposit & withdrawal	Maximum deposit and withdrawal amounts per day. Includes all transactions made by a client in a single day.	Maximum Deposit	MAX(DepositAmount)	The total amount of all deposits made by a client in a single day is considered. For instance, if a client makes two deposits of \$50 and \$60, their total deposit amount of \$110 will be compared to the daily deposit totals of other clients.
		Maximum Withdrawals	MAX(WithdrawalAmount)	The total amount of all withdrawals made by a client in a single day. The same logic applies as with deposits.

How to Use:

• Sort by daily maximums to pinpoint peak transaction days.

• Use this data to ensure sufficient liquidity on high-volume days.

	Pro Tips: • Use this panel to detect potential VIP clients with high deposits. Consider segmenting these players for exclusive offers to boost retention. • On high withdrawal days, consider introducing retention campaigns to ensure players remain active.																																						
Average deposit	The average deposit amount by a client, calculated as the total deposit amount divided by the number of deposits.	Average Deposit	SUM(DepositAmount) / SUM(DepositCount)	--																																			
	Average deposit <table><tr><th>Day</th><th>Average deposit (€)</th></tr><tr><td>1</td><td>€49.90</td></tr><tr><td>2</td><td>€46.71</td></tr><tr><td>3</td><td>€48.46</td></tr><tr><td>4</td><td>€53.00</td></tr><tr><td>5</td><td>€49.98</td></tr><tr><td>6</td><td>€49.67</td></tr><tr><td>7</td><td>€53.70</td></tr><tr><td>8</td><td>€49.54</td></tr><tr><td>9</td><td>€54.33</td></tr><tr><td>10</td><td>€55.11</td></tr><tr><td>11</td><td>€52.57</td></tr><tr><td>12</td><td>€53.18</td></tr><tr><td>13</td><td>€52.84</td></tr><tr><td>14</td><td>€57.76</td></tr><tr><td>15</td><td>€49.65</td></tr><tr><td>16</td><td>€49.39</td></tr><tr><td>17</td><td>€49.52</td></tr></table> € 51.63 Avg. deposit			Day	Average deposit (€)	1	€49.90	2	€46.71	3	€48.46	4	€53.00	5	€49.98	6	€49.67	7	€53.70	8	€49.54	9	€54.33	10	€55.11	11	€52.57	12	€53.18	13	€52.84	14	€57.76	15	€49.65	16	€49.39	17	€49.52

How to Use: • Use this panel to monitor player spending habits and assess the overall deposit behavior of your user base. • Filter by time period, region, or player segments to identify trends in average deposit amounts.																																							

✓ Pro Tips: • A sudden increase in the average deposit amount might indicate the success of a high-value player campaign or changes in player spending habits. • If the average deposit is below your expectations, consider offering deposit bonuses to encourage higher amounts. • Identify players whose deposits consistently exceed the average and target them with personalized VIP offers.				
% of active users who made a deposit	The percentage of active users (those who made at least one transaction in Sportsbook or Casino during the reporting period) who completed at least one deposit.	User-to-Deposit Conversion Rate	COUNT(ClientsPaid) / COUNT(ActiveUsers)	--
	% of active users who made a deposit 60.00% 55.78% 53.09% 47.27% 53.41% 55.71% 58.98% 58.80% 59.91% 52.74% 60.80% 57.63% 58.81% 47.40% 56.08% 58.26% 51.29% 54.75% 40.00% 20.00% 0.00% 27 Oct28 Oct29 Oct30 Oct31 Oct1 Nov2 Nov3 Nov4 Nov5 Nov6 Nov7 Nov8 Nov9 Nov10 Nov11 Nov12 Nov 55.31% %CR users to depos.			
	i How to Use: • Use this panel to evaluate how effectively your platform converts active players into depositors.			

	✓ Pro Tips: • A low percentage might indicate issues with the onboarding process. Simplify deposit methods or offer welcome bonuses to boost conversion. • Compare this metric before and after deposit-focused campaigns to assess their impact. • Use filters to examine this percentage for specific player segments, such as new users or users from specific regions.		
Deposits Total	The total number of deposits made during the reporting period.	# of Deposits Total	SUM(DepositCount) --
	Deposits Total 15K 10K 5K 0K 11,063 10,109 10,085 10,501 10,125 12,026 12,899 12,397 11,065 12,014 12,734 12,904 12,221 13,011 12,724 10,930 10,482 197,290 # of deposits total		
	i How to Use: • Use this panel to track player engagement and the effectiveness of deposit-focused campaigns.		

✔

Pro Tips:

• Monitor this metric over time to detect periods of increased deposit activity and plan future campaigns around similar conditions.

• Use the number of deposits to compare the success of various promotions or bonus offers.

• If deposits suddenly decline, investigate potential issues with payment systems or player satisfaction.

Number of First Time Deposits (FTD)

The **total number** of clients' first-time deposits during the reporting period.

of FTD

SUM(FTDDepositCount)

--

Number of First Time Deposits (FTD)

Pro Tips:

- A low FTD count might indicate the need to adjust your first deposit incentives.
- Compare FTD counts across traffic sources to identify which channels are most effective at acquiring depositing users.
- Monitor FTDs in combination with cohort analysis to understand the retention potential of new users.

Average First Deposit

The average amount of first deposits during the reporting period.

Average First Deposit

AVG(FTD)

--

12 Nov	€77.3
13 Nov	€136.6

€ 99.5

Avg. first deposit

How to Use:

- Use this panel to evaluate the spending behavior of newly acquired users.

Pro Tips:

- If the average first deposit is low, consider introducing tiered bonuses that reward higher first deposits.
- Identify new users with above-average first deposits and engage them with tailored campaigns to encourage repeat deposits.
- Compare the average first deposit across payment systems to optimize your marketing strategies for different demographics.

FTD Cohort Analysis (% of clients who continue to deposit after the first deposit)

Shows the percentage of clients who continue to deposit after their first deposit over subsequent time periods.

% of clients who continue to deposit after their first deposit

SUM(Users with subsequent deposits) / SUM(FTD users in the cohort)

--

**How to Use:**

Use this panel to measure player retention and the long-term value of new users.

- Use the "+" and "-" buttons to adjust the level of data aggregation. For instance, you can switch between viewing daily, monthly, quarterly, or yearly data. This feature is particularly helpful for analyzing trends over different timeframes without switching dashboards.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

**Pro Tips:**

- If retention rates decline after specific periods (e.g., 1 month), implement re-engagement campaigns like cashback offers or loyalty bonuses.
- Use insights from cohort analysis to time promotions when players are most likely to stop depositing.
- Analyze cohorts by traffic source or demographic to focus acquisition efforts on sources with high retention rates.

Grand Total		10,185,609 €	8,301,804 €	1,884,805 €	100.00%	100.00%

How to Use:

Use this panel to evaluate the performance of different payment systems and optimize the availability of methods for your audience.

• Click on the icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).

• The option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

**Pro Tips:**

- Focus marketing efforts on highlighting the most-used payment systems in your player base to simplify the deposit process.
- Investigate why some payment systems have low engagement and consider offering incentives for their use.
- Analyze the popularity of payment systems by region to align your deposit options with local preferences.

6.2 BETS

This section is available for **all payment plans** (Basic, Advanced, and Premium), and presents analytics on betting activities across Casino and Sportsbook.

6.2.1 Filtering

On the "**Bets**" tab, you can filter data within a specific range by selecting from predefined periods such as '**Last 30 days**' or customizing the range by choosing specific days, weeks, or months and their durations.

Narrow down the results by product type – **Casino**, **SportsBook**, or **All**. By selecting or deselecting checkboxes, you can instantly adjust the displayed metrics to focus on a specific product category. After making your selection, click "**Apply**" to update the view.

If you wish to reset your selection, use the "**Cancel**" button.

GGR & Turnover, GGR %	Gross Gaming Revenue (GGR), Turnover, and GGR percentage for Casino and Sportsbook.	GGR. SportsBook	SUM(BetAmount - CalcWinningAmount)	BetAmount for Free bets = 0 CalcWinningAmount contains Free bet winnings. CalcWinningAmount contains Boost bonus winnings. BetAmount contains a 'Wagering' bonus money. CalcWinningAmount contains a 'Wagering' bonus money. --- BetAmount is grouped by the date of bet creation. CalcWinningAmount is grouped by the date of bet calculation. <u>For example:</u> Bet A was created yesterday and calculated today: BetAmount = \$20, CalcWinningAmount = \$50 Bet B was created today and calculated today: BetAmount = \$30, CalcWinningAmount = \$40 Today GGR = (BetAmount B \$30) - (CalcWinningAmount A \$50 + CalcWinningAmount B \$40) = -\$60
----------------------------------	--	------------------------	---	--

	 How to Use: • This panel helps you evaluate the profitability of gaming activities and the relationship between revenue and overall betting volume. • To view specific trends, apply filters by date or product type (Casino or Sportsbook). Analyze the GGR percentage to assess the revenue margin for each product.			
	 Pro Tips: • Regularly review the GGR percentage to identify fluctuations in profitability and understand how changes in betting behavior or promotions impact revenue. • Use the Casino and Sportsbook breakdown to see which product is performing better and focus marketing efforts accordingly. • A sudden spike or drop in GGR or Turnover might indicate an anomaly, such as a high roller's activity or an operational issue. Investigate these changes for deeper insights.			
Number of Bets	The total number of bets or transactions in Casino and Sportsbook.	# of bets Casino / SB	SUM(BetAmount)	--

How to Use:

This panel helps you understand customer engagement levels and compare activity across products.

Pro Tips:

- A steady or increasing number of bets indicates good customer engagement, while a decline might require new promotional campaigns.
- Identify the times or days with the highest betting volume to optimize marketing or operational efforts.
- Compare bet counts for Casino and Sportsbook to determine which product attracts more activity and why.

Number of Playing Clients	The number of active clients who placed at least one bet in Casino or Sportsbook during the reporting period.	# of clients Casino / SB	SUM(ActiveUsers)	--

How to Use: • This panel calculates the average bet amount, giving you a sense of how much players are wagering per bet in Casino or Sportsbook. • It's useful for assessing user behavior and spending patterns. • Filter by product and date to evaluate betting trends and identify any unusual spikes or drops.																																																									

✓ Pro Tips: - A rise in average bet amounts could indicate higher engagement or confidence among players, while a decline might signal risk aversion. - High average bets could signify VIP activity, providing an opportunity to target these clients with exclusive offers. - Adjust minimum and maximum betting limits based on the average bet data to align with player behavior.				
MAX Bet	The highest bet amount placed during the reporting period in Casino or Sportsbook.	MAX Bet Casino / SB	MAX(BetAmount)	The maximum bet amount for the reporting period by Casino and SportsBook.

		i How to Use: This panel gives insight into big spenders and the maximum wagering potential on your platform.		

**Pro Tips:**

- Track the highest bet amounts to identify and nurture VIP clients with personalized offers or rewards.
- Ensure that maximum bets do not negatively impact overall revenue, particularly if they result in large payouts.
- Showcase impressive maximum bets in promotions to attract players seeking high-stakes gaming.

6.3 ATTRACTION

This section is available for **all payment plans** (Basic, Advanced, and Premium), and provides insights into user acquisition and engagement.

6.3.1 Filtering

On the "**Attraction**" tab, you can filter data within a specific range by selecting from predefined periods such as '**Last 30 days**' or customizing the range by choosing specific days, weeks, or months and their durations.

The dashboard updates instantly upon selection, ensuring you always view the most relevant data based on your criteria.

6.3.2 Panels and Metrics

Panel Name	Description	Metric	Formula	Additional explanations (optional)
Registrations	An overview of user acquisition and engagement metrics during the reporting period.	# of registrations	COUNT(DISTINCT ClientID)	The total number of clients registered during the reporting period.
		% of players with deposits	COUNT(DISTINCT ClientIDWithDeposit) / COUNT(DISTINCT ClientID)	The percentage of registered clients who made at least one deposit at any time after registration.

% of
players
who
played on
the day of
registrati
on

COUNT(DIST
INCT
ClientIDWith
Bets) /
COUNT(DIST
INCT
ClientID)

The percentage of registered
clients who placed at least one
bet (in Casino or Sportsbook) on
the same day they registered.

Registrations

IsDeposit

No

Yes

33,027

of registrations

12.97%

% of players with
deposits

8.21%

Played in the day of
reg.

How to Use:

- Use this panel to monitor the effectiveness of your marketing campaigns and user acquisition strategies.

 Pro Tips: • Compare the number of registrations over time to identify patterns or trends related to specific campaigns or seasonal factors. • Pair registration metric with the "% of Players with Deposits" panel to assess how many of the newly registered users convert into paying clients. • High engagement on the registration day often leads to better long-term retention. Focus on improving welcome bonuses or instant gameplay offers to increase % of players who played on the day of registration metric. • Use cohort analysis to track whether users who play on registration day are more likely to stay active in the future. • Compare data across different acquisition campaigns to identify which ones bring in users who are immediately active.				
Cohort Analysis (% of clients who continue to play after registration)	Tracks the percentage of clients who continued to engage in betting or gaming after their initial registration.	% of players who played after the day of registration	SUM(ActiveUsers) / SUM(Users)	--

Cohort Analysis (% of clients who continue to play after registration)

Month of DateMon..	Registrations	month0	month1	month2	month3	month4	month5	month6
May 2024	22325	26.0%	11.2%	5.9%	4.4%	3.7%	3.2%	2.2%
June 2024	22780	30.5%	11.3%	4.8%	3.9%	3.5%	2.2%	0.0%
July 2024	22306	29.0%	8.3%	4.6%	3.6%	2.3%	0.0%	0.0%
August 2024	21731	29.6%	9.1%	4.4%	2.2%	0.0%	0.0%	0.0%
September 2024	20240	29.2%	9.2%	3.1%	0.0%	0.0%	0.0%	0.0%
October 2024	40101	17.7%	5.4%	0.0%	0.0%	0.0%	0.0%	0.0%

How to Use:

This panel is designed to highlight user retention over time.

- Use the "+" and "-" buttons to adjust the level of data aggregation. For instance, you can switch between viewing daily, monthly, quarterly, or yearly data. This feature is particularly helpful for analyzing trends over different timeframes without switching dashboards.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

Pro Tips:

- Use this panel to evaluate the long-term effectiveness of your retention campaigns by examining trends in user behavior.
- Pay close attention to drop-off rates to identify when clients tend to disengage. Implement targeted campaigns to retain users during those periods.

**RFM Analysis.
SportsBook**

Provides insights into client segmentation based on Recency, Frequency, and Monetary value of their bets. Tracks user activity in 12-month windows.

--

--

Data for the last 12 months. SportsBook.

Rows: a group of clients who made a certain number of bets, for example, from 1 to 5 for the entire period (12 months).

Columns: how long ago these clients made their last bet, for example, the "8 weeks" column contains all clients whose last bet was between 4-8 weeks ago.

RFM Analysis. SportsBook

Number of bets (\$B)	Last bet (\$B)				
	2 weeks	4 weeks	8 weeks	12 weeks	> 12 weeks
1-5	13.5%	10.5%	15.4%	16.3%	0.1%
6-50	13.5%	5.4%	6.4%	3.9%	0.0%
51-200	7.3%	0.8%	0.8%	0.3%	
201-1000	4.4%	0.2%	0.2%	0.0%	
1001+	0.5%	0.0%	0.0%	0.0%	0.4%

How to Use:

This panel segments clients into groups based on **Recency** (how recently they engaged), **Frequency** (how often they engage), and **Monetary Value** (how much they bet). It provides insights into user behavior over a 12-month period.

- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

Pro Tips:

- Identify high-value clients (those with high frequency and monetary value) and target them with exclusive promotions.
- Monitor recency metrics to identify potentially inactive users and create reactivation campaigns to bring them back.
- Use segmentation data to personalize marketing efforts based on each group's behavior.

**RFM
Analysis.
Casino**

Provides insights into client segmentation based on Recency, Frequency, and Monetary value of their bets. Tracks user activity in 12-month windows.

--

--

Data for the last 12 months. Casino.
Rows: a group of clients who made a certain number of bets, for example, from 1 to 10 for the entire period (12 months).
Columns: how long ago these clients made their last bet, for example, the "8 weeks" column contains all clients whose last bet was between 4-8 weeks ago.

RFM Analysis. Casino

Number of bets (Casino)	Last bet (Casino)				
	2 weeks	4 weeks	8 weeks	12 weeks	> 12 weeks
1-10	1.2%	1.4%	2.0%	2.3%	0.0%
11-100	4.0%	3.4%	6.0%	5.8%	0.1%
101-300	4.7%	3.3%	4.2%	3.6%	0.0%
301-1000	7.2%	3.7%	4.1%	2.7%	0.0%
1001-5000	10.8%	3.5%	3.1%	1.5%	0.0%
5000+	18.1%	1.8%	1.1%	0.4%	

How to Use:

This panel segments clients into groups based on **Recency** (how recently they engaged), **Frequency** (how often they engage), and **Monetary Value** (how much they bet). It provides insights into user behavior over a 12-month period.

- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

Pro Tips:

- Identify high-value clients (those with high frequency and monetary value) and target them with exclusive promotions.
- Monitor recency metrics to identify potentially inactive users and create reactivation campaigns to bring them back.
- Use segmentation data to personalize marketing efforts based on each group's behavior.

Number of users who use 2 or more accounts during the same day

Displays the number of clients who used more than one account within a single day, identified via device fingerprints.

--

--

Device fingerprinting collects unique data points (e.g., browser version, operating system, IP address) to detect when different accounts are accessed from the same device.

The widget aggregates this information to visualize patterns, which help identify potential cases of multi-accounting or fraud.

Number of users who use 2 and more accounts during the same day

How to Use:

- This panel highlights the number of clients who used more than one account on the same day, detected through device fingerprinting.
- It's a critical tool for identifying potentially fraudulent behavior.

**Pro Tips:**

- Investigate anomalies in this panel to detect and prevent multi-account abuse.
- Pair this data with deposit or bonus panels to see if users are exploiting bonuses with multiple accounts.
- Use insights from this panel to strengthen anti-fraud measures, such as implementing stricter verification processes or monitoring IP/device usage patterns.

6.4 WEB ANALYTICS

This section is available for **Advanced** and **Premium** payment plans and analyzes traffic and client behavior.

6.4.1 Filtering

On the "**Web Analytics**" tab, you can filter data within a specific range by selecting from predefined periods such as '**Last 30 days**' or customizing the range by choosing specific days, weeks, or months and their durations.

The dashboard updates instantly upon selection, ensuring you always view the most relevant data based on your criteria.

Here, you can also filter data by "**Medium**", allowing you to view metrics segmented by specific traffic sources, such as affiliate. Simply select one or multiple mediums from the dropdown list, then click "**Apply**" to update the dashboard with the chosen segmentation.

**Traffic sources available for filtering:**

- **.af - Affiliate** traffic (users referred through affiliate partners).
- **.ch - Channel** traffic.

- **.co** - **Content** traffic.
- **.cp** - **Campaign** traffic (traffic generated from specific ad campaigns).
- **.cr** - **CRM** or customer retention traffic (outreach campaigns (e.g., email, SMS)).
- **.di** - **Direct** traffic (visitors who directly typed the URL).
- **.in** - **Influencer** traffic.
- **.or** - **Organic** traffic (visitors from unpaid search engine results).
- **.pa** - **Paid** traffic.
- **.re** - **Referral** traffic (visitors from external websites that link to your website).
- **.te** - **Test** traffic (traffic from internal testing or debugging campaigns).

6.4.2 Panels and Metrics

Panel Name	Description	Metric	Formula	Additional explanations (optional)
------------	-------------	--------	---------	------------------------------------

Aggregated numbers	Summarizes key metrics such as sessions, registrations, and deposit amounts sourced from web traffic analytics. • Sessions: The total number of sessions on the site or app, based on Google Analytics (GA) data. • Registrations: The number of user registrations, according to GA data. • % CR (Registrations): The conversion rate from sessions to registrations. • Deposits from Registrations: The total deposit amount made by registered clients. • Turnover from Registrations: The total bet amount placed by registered clients.	Sessions	COUNT(DISTINCT GaSessionId)	The count of unique session IDs.				
		# of registrations	COUNT(DISTINCT ClientID)	The total number of clients registered during the reporting period.				
		% CR (Registrations)	COUNT(DISTINCT ClientId) / COUNT(DISTINCT GaSessionId)	The conversion rate from the number of sessions to the number of registrations.				
		Deposits from Registrations	SUM(DepositAmount)	Deposit amount from registered clients.				
		Turnover from Registrations	SUM(BetAmount)	Bet amount from registered clients.				
	<table> <tr> <td>72,144 Sessions</td> <td>2,148 Registrations</td> <td>2.98% % CR (Regs)</td> <td>€122,802 Depos. from regs</td> <td>€466,155 Bets from regs</td> </tr> </table>				72,144 Sessions	2,148 Registrations	2.98% % CR (Regs)	€122,802 Depos. from regs
72,144 Sessions	2,148 Registrations	2.98% % CR (Regs)	€122,802 Depos. from regs	€466,155 Bets from regs				
 How to Use: • Use this panel to quickly assess overall platform performance and identify trends over time.								

Pro Tips:

- Use the date filter to focus on specific time frames to pinpoint periods of high activity and adjust marketing efforts accordingly.
- Check spikes in registrations or deposits after launching campaigns to measure their impact.
- Evaluate the ratio between sessions and registrations to assess the quality of incoming traffic.

**Sessions
(traffic)**

Displays the total number of sessions aggregated by traffic source and date during the reporting period.

Sessions

COUNT(DISTINCT GaSessionId)

The count of unique session IDs.

Sessions (traffic)

How to Use:

- This panel helps you to track how effectively your campaigns or channels are driving traffic to your platform.

Pro Tips:

- Use the **“Filter by Medium”** option to isolate specific traffic sources (e.g., organic, paid, or affiliate) and analyze their performance.
- Look for seasonal spikes or drops in sessions to plan future campaigns around similar periods.
- Focus on traffic sources with a higher conversion rate to optimize your ad spend.

Conversion Rate

Tracks conversion rates from sessions to registrations and registrations to first-time deposits.

%CR from traffic to registrations

COUNT(DISTINCT ClientId) / COUNT(DISTINCT GaSessionId)

Deposit amount from registered clients.

%CR from registration to first-time deposit (FTD)

COUNT(DISTINCT ClientIDWithDeposit) / COUNT(DISTINCT ClientId)

Deposit count from registered clients.

Conversion Rate: Traffic -> Registrations & Registrations -> FTD

How to Use:

- The **Conversion Rate** panel calculates the percentage of sessions that lead to registrations (% CR Regs) and registrations that convert to first-time deposits (% CR Regs to FTD).
- This helps measure the effectiveness of your user acquisition funnel.

Pro Tips:

- If % CR Regs to FTD is low, refine your onboarding process or incentives for first-time depositors.
- A/B test different landing page designs or content to improve session-to-registration conversion.
- Use filters to identify traffic sources with the best conversion rates and allocate resources accordingly.

of registrations by source

Visualizes the number of registrations, segmented by traffic source.

of registrations by source

COUNT(DISTINCT ClientId)GROUPED BY Source

--

How to Use:

- This panel breaks down the number of registrations by traffic source, helping you understand where your registered users are coming from.
- Use this to evaluate campaign performance and traffic quality.

Pro Tips:

- Identify underperforming traffic sources and adjust ad targeting to improve results.
- Monitor which campaigns drive the most registrations and replicate their strategies.
- Use the **"Filter by Medium"** option to compare the performance of paid vs. organic sources.

Traffic funnel

Displays a table summarizing key funnel metrics (sessions, registrations, first-time deposits, deposit amounts) by medium, source, and campaign.

Medium
(Multiple values)

Source
(Multiple values)

Campaign
(All)

**How to Use:**

The Traffic Funnel panel visualizes key metrics—such as sessions, registrations, first-time deposits, and deposit amounts—aggregated by medium, source, and campaign. It provides a clear picture of the user journey and the effectiveness of marketing efforts.

- The "+" and "-" allow you to add or remove a column with additional details about campaigns. For example, clicking "+" will include a new column showing associated campaign names for the listed traffic sources, providing deeper insights into which campaigns are driving traffic or conversions. Conversely, clicking "-" will remove this column, simplifying the table view for a high-level analysis.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

**Pro Tips:**

- Look for stages with significant drop-offs (e.g., high sessions but low registrations) to address gaps in the user journey.
- Focus on campaigns that lead to deposits, not just registrations, for higher ROI.
- Use the table to benchmark different campaigns and prioritize those with better conversion and deposit rates.

6.5 CASINO DETAILS

This section is available for **Advanced** and **Premium** payment plans and provides **in-depth analytics for Casino activities**, segmented by turnover, winnings, and other metrics. It helps evaluating game performance, client profitability, and bonus costs.

6.5.1 Filtering

On the **"Casino Details"** tab, you can filter data within a specific range by selecting from predefined periods such as **'Last 30 days'** or customizing the range by choosing specific days, weeks, or months and their durations.

The dashboard updates instantly upon selection, ensuring you always view the most relevant data based on your criteria.

6.5.2 Panels and Metrics

Panels Name	Description	Metric	Formula	Additional explanations (optional)
-------------	-------------	--------	---------	------------------------------------

GGR, NGR, Bonus Cost	Provides a comprehensive view of key financial metrics: Gross Gaming Revenue (GGR), Net Gaming Revenue (NGR), and Bonus Costs. It allows evaluating the overall profitability of the gaming business while factoring in the impact of promotional costs (bonuses).	GGR (Gross Gaming Revenue)	SUM(Bet Amount - WinAmount + RakeAmount)	Total revenue before deducting bonuses. BetAmount for Free bets = 0. CalcWinningAmount contains Free bet winnings. CalcWinningAmount contains Boost bonus winnings. BetAmount contains a 'Wagering' bonus money. CalcWinningAmount contains a 'Wagering' bonus money. --- CalcWinningAmount is grouped by the date of calculation of bets.
		NGR (Net Gaming Revenue)	SUM(GGR - BonusCost)	The sum of the difference between GGR and Bonus Cost in Casino during the reporting period.
		Bonus Cost	SUM(BonusPaidAmount)	The amount of money received to the real balance after fulfilling the bonus conditions. The client can withdraw this money. On this chart only Wagering (Manual/Deposit), SkillGames, and CashBack bonuses are present. Free spins and Boost Bonuses are already included in GGR (in winnings).

GGR, NGR, BonusCost

€ 2,509,506
GGR

€ 2,196,265
NGR

€ 313,241
Bonus Cost

How to Use:

- Use this panel to assess the profitability of your platform and evaluate the impact of bonuses on overall revenue.

Pro Tips:

- Compare GGR and NGR values to evaluate how bonuses influence profitability. A large gap may indicate high bonus costs.
- If Bonus Cost is disproportionately high, revisit bonus structures or promotional campaigns.
- Use filters to identify periods of high GGR and low Bonus Cost, replicating those successful strategies.

**How to Use:**

This table aggregates data by Product Name and Provider Name, showing metrics like Turnover, Winnings, GGR, and ClientsCount. It's ideal for identifying top-performing games, providers, or categories.

- The "+" and "-" allow you to add or remove a column with additional details about provider name. For example, clicking "+" will include a new column showing provider name for the listed products, providing deeper insights into which providers are contributing to the product's performance. Conversely, clicking "-" will remove this column, simplifying the table view for a high-level analysis.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

**Pro Tips:**

- Focus on games with high Turnover and ClientsCount. These are likely engaging players the most.
- Remove or replace games with low GGR to prioritize those that generate higher revenue.
- Compare GGR across providers to negotiate better terms with high-performing partners.
- Track metrics over time to assess which games contribute most to player retention.

Casino Cohort Analysis

Tracks client retention and activity post-registration, focusing on Casino engagement.

Retention rates over time

--

The percentage of players who continue to engage with the platform (e.g., play games, deposit) after their first activity over a defined period.

Casino Cohort Analysis								
Month of Date	MonthReg	Registrations	month0 (casino)	month1 (casino)	month2 (casino)	month3 (casino)	month4 (casino)	month5 (casino)
May 2024		22325	21.57%	7.68%	4.32%	3.56%	3.21%	2.85%
June 2024		22780	15.33%	6.86%	3.71%	3.16%	2.98%	1.84%
July 2024		22306	13.80%	5.46%	3.27%	2.80%	1.78%	0.00%
August 2024		21731	16.93%	5.91%	3.36%	1.63%	0.00%	0.00%
September 2024		20240	16.26%	5.57%	2.12%	0.00%	0.00%	0.00%
October 2024		40101	9.49%	3.02%	0.00%	0.00%	0.00%	0.00%
November 2024		20701	6.87%	0.00%	0.00%	0.00%	0.00%	0.00%

How to Use:

This panel tracks client retention by analyzing engagement over time. Use it to understand how many players return to play or deposit after their first activity.

- Use the "+" and "-" buttons to adjust the level of data aggregation. For instance, you can switch between viewing daily, monthly, quarterly, or yearly data. This feature is particularly helpful for analyzing trends over different timeframes without switching dashboards.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

**Pro Tips:**

- Identify cohorts with high retention and analyze their behavior to replicate success with other groups.
- Use this panel to assess the long-term impact of acquisition or reactivation campaigns.
- Focus on improving retention rates for cohorts that show a drop-off after initial engagement.

Top Winners

Lists the top 10 winners during the selected period.

NGR
(Net
Gamin
g
Reven
ue)

SUM(GGR
-
BonusCo
st)

The sum of the difference between GGR and Bonus Cost in Casino during the reporting period for each player. 10 players with the highest positive NGR within the reporting period are the top 10 winners.

Top Winners

Index	ClientId	GameStyle	NGREur
1	1402135321	Neutral	-40,675 €
2	755525728	Neutral	-19,605 €
3	1272484352	Low Risk	-15,554 €
4	238910102	Neutral	-13,963 €
5	1103377501	Neutral	-11,513 €
6	1634782	Neutral	-8,756 €
7	999277957	Neutral	-8,434 €
8	163368293	Neutral	-7,864 €
9	281502811	Low Risk	-7,416 €
10	1272857484	Not Playing	-7,383 €

 How to Use: • The Top Winners panel displays the 10 players with the highest Net Gaming Revenue (NGR) within the selected period. • Use this to track high rollers and understand their gaming behavior.				
 Pro Tips: • Pay attention to winning trends to identify potential changes in behavior or platform risks. • Use this data to reward top winners with exclusive offers to maintain loyalty. • See which games contribute most to high NGR for these players and promote them further.				
Top Losers	Lists the top 10 losers during the selected period.	NGR (Net Gaming Revenue)	SUM(GGR - BonusCost)	The sum of the difference between GGR and Bonus Cost in Casino during the reporting period for each player. 10 players with the lowest negative NGR within the reporting period are the top 10 losers.

Top Losers

Index	ClientId	GameStyle	NGREur
1	105575901	Not Playing	49,912 €
2	832904514	Neutral	46,147 €
3	2076899021	Not Playing	43,269 €
4	1977128049	Not Playing	40,902 €
5	964842197	Neutral	24,543 €
6	310920937	Neutral	23,932 €
7	305224187	Neutral	20,056 €

How to Use:

- This panel lists the 10 players with the lowest NGR (negative values) during the reporting period, identifying players who lost the most.

Pro Tips:

- Monitor top losers for any signs of risky behavior that may require intervention to comply with responsible gaming practices.
- Offer incentives or bonuses to top losers to keep them engaged without exacerbating losses.
- Analyze which games generate the most losses and adjust marketing strategies accordingly.
- Create special campaigns or tournaments targeted at players who consistently appear in this panel.

6.6 SPORTSBOOK DETAILS

This section is available for **Advanced** and **Premium** payment plans and provides granular insights into Sportsbook operations, including turnover, client behavior, and bet analysis.

6.6.1 Filtering

On the **"SportsBook Details"** tab, you can filter data within a specific range by selecting from predefined periods such as **'Last 30 days'** or customizing the range by choosing specific days, weeks, or months and their durations.

The dashboard updates instantly upon selection, ensuring you always view the most relevant data based on your criteria.

6.6.2 Panels and Metrics

Panel Name	Description	Metric	Formula	Additional explanations (optional)
------------	-------------	--------	---------	------------------------------------

GGR, NGR, Bonus Cost	Provides a comprehensive view of key financial metrics: Gross Gaming Revenue (GGR), Net Gaming Revenue (NGR), and Bonus Costs. It allows evaluating the overall profitability of the gaming business while factoring in the impact of promotional costs (bonuses).	GGR (Gross Gaming Revenue)	$SUM(BetAmount - CalcWinningAmount)$	BetAmount for Free bets = 0 CalcWinningAmount contains Free bet winnings. CalcWinningAmount contains Boost bonus winnings. BetAmount contains a 'Wagering' bonus money. CalcWinningAmount contains a 'Wagering' bonus money. --- BetAmount is grouped by the date of bet creation. CalcWinningAmount is grouped by the date of bet calculation. <u>For example:</u> Bet A was created yesterday and calculated today: $BetAmount = \\$20$, $CalcWinningAmount = \\$50$ Bet B was created today and calculated today: $BetAmount = \\$30$, $CalcWinningAmount = \\$40$ Today GGR = $(BetAmount\ B\ \\$30) - (CalcWinningAmount\ A\ \\$50 + CalcWinningAmount\ B\ \\$40) = -\\$60$
		NGR (Net Gaming Revenue)	$SUM(GGR - BonusCost)$	The sum of the difference between GGR and Bonus Cost in SportsBook during the reporting period.

**Pro Tips:**

- Use NGR trends to quickly detect areas where bonus costs are outpacing revenue, such as overly generous free bet promotions.
- Compare GGR and Bonus Costs alongside retention rates to ensure bonuses are driving loyalty and not just short-term gains.
- For sports generating high GGR but low NGR, consider adjusting odds or bonus offerings to balance profitability.

Sports Book. Report Table

The table with basic metrics (Turnover, Winnings, Bonus Win Amount, and GGR) from SportsBook bets aggregated by Sport, Region, and Match.

Turnover

SUM(BetAmount)

BetAmount for Free bets = 0.**BetAmount** contains a 'Wagering' bonus money.

Winnings

SUM(CalcWinningAmount)

CalcWinningAmount contains Free bet winnings.**CalcWinningAmount** contains Boost bonus winnings.**CalcWinningAmount** contains a 'Wagering' bonus money.

CalcWinningAmount is grouped by the date of calculation of bets.

GGR (Gross Gaming Revenue)

SUM(BetAmount - CalcWinningAmount)

--

ClientsCount

COUNT(DISTINCT ClientID)

Unique players who placed at least one bet during the selected reporting period.

SportsBook. Report Table

Sport	+	Region	-	Turnover (Eur)	Winning (Eur)	GGR (Eur)	ClientsCount
Soccer		Europe		720,316 €	689,500 €	30,816 €	93,059

		Switzerland		19,614 €	15,846 €	3,768 €	4,279

How to Use:

This table provides a detailed breakdown of betting activity, revenue, and payouts by sport and region. Use it to pinpoint which areas are most profitable and which need improvement.

- The "+" and "-" buttons allow you to add or remove columns with additional details about Region and Match. For example, clicking "+" will add columns that display detailed regional performance and match-specific metrics, offering deeper insights into the geographic and event-level contributions to Sportsbook performance. Conversely, clicking "-" will hide these columns, simplifying the table view for a broader, less granular analysis.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

Pro Tips:

- Focus on underperforming regions by offering localized promotions to increase player engagement.
- Identify sports with the highest Turnover and create targeted upselling opportunities, like accumulator bets or in-play promotions.
- Analyze the Winnings metric to find sports with unusually high payouts and evaluate if odds adjustments are needed.
- High ClientsCount but low GGR could indicate inefficiencies, such as bonuses eating into revenue—target these sports or matches for optimization.

Sports Book Cohort Analysis

Shows how many clients (as a percentage) continue to make bets in subsequent periods after registration.

Retention rates over time

--

The percentage of players who continue to engage with the platform (e.g., play games, deposit) after their first activity over a defined period.

SportsBook. Cohort Analysis									
Month of Date	MonthReg	Registrations	month0 (SportsBook)	month1 (SportsBook)	month2 (SportsBook)	month3 (SportsBook)	month4 (SportsBook)	month5 (SportsBook)	month6 (SportsBook)

**How to Use:**

This panel is vital for understanding long-term engagement and the success of retention strategies.

- Use the "+" and "-" buttons to adjust the level of data aggregation. For instance, you can switch between viewing daily, monthly, quarterly, or yearly data. This feature is particularly helpful for analyzing trends over different timeframes without switching dashboards.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

**Pro Tips:**

- Launch segmented campaigns (e.g., by sport preference) to compare how retention rates change across cohorts.
- Use retention data to time reactivation offers effectively. For example, if most players drop off after two weeks, launch an email campaign on day 10.
- Compare retention rates during major sports events to understand which campaigns work best for seasonal audiences.
- Tailor retention strategies to high-stakes matches or tournaments to keep players engaged during key periods.

Top Winners

Lists the top 10 winners during the selected period.

NGR (Net Gaming Revenue)

SUM(GGR - BonusCost)

The sum of the difference between GGR and Bonus Cost in Casino during the reporting period for each player. 10 players with the highest positive NGR within the reporting period are the top 10 winners.

Top Winners

Index	ClientId	GameStyle	NGREur
1	1402135321	Neutral	-40,675 €
2	755525728	Neutral	-19,605 €
3	1272484352	Low Risk	-15,554 €
4	238910102	Neutral	-13,963 €
5	1103377501	Neutral	-11,513 €
6	1634782	Neutral	-8,756 €
7	999277957	Neutral	-8,434 €
8	163368293	Neutral	-7,864 €
9	281502811	Low Risk	-7,416 €
10	1272857484	Not Playing	-7,383 €

How to Use:

<

Pro Tips:

- Offer high-value players exclusive access to high-stakes matches or personalized accumulator bets to increase their engagement.
- Identify VIP players for special tiers and use this list to build VIP programs or loyalty tiers with unique rewards for top contributors.
- Analyze the games and bets favored by winners to create curated experiences for similar players.
- High winners could reduce overall margins if they withdraw winnings; monitor patterns to adjust risk levels appropriately.

Top Losers

Lists the top 10 losers during the selected period.

NGR (Net Gaming Revenue)

SUM(GGR - BonusCost)

The sum of the difference between GGR and Bonus Cost in Casino during the reporting period for each player. 10 players with the lowest negative NGR within the reporting period are the top 10 losers.

Top Losers

Index	ClientId	GameStyle	NGREur
1	105575901	Not Playing	49,912 €
2	832904514	Neutral	46,147 €
3	2076899021	Not Playing	43,269 €
4	1977128049	Not Playing	40,902 €
5	964842197	Neutral	24,543 €
6	310920937	Neutral	23,932 €
7	305224187	Neutral	20,056 €

**How to Use:**

- This panel shows the top 10 players with the highest losses, helping you track patterns and assess risks in player behavior.

**Pro Tips:**

- Use gathered data to promote responsible gaming by offering small rewards or advice to players with consistent losses.
- Offer targeted bonuses, like cashback or free bets, to retain top losers and maintain a positive player experience.
- Identify which sports or events are driving consistent losses and consider adjusting odds or limits to maintain fairness and engagement.

6.7 CRM CAMPAIGNS

This section is available for **Advanced** and **Premium** payment plans and evaluates the performance of marketing campaigns executed via the CRM, tracking client engagement metrics and their impact on revenue generation.

6.7.1 Filtering

On the "**CRM Campaigns**" tab, you can filter data within a specific range by selecting from predefined **Campaign Start Date** periods such as '**Last 30 days**' or customizing the range by choosing specific days, weeks, or months and their durations.

Additionally, the **Campaign Name** filter allows users to refine the CRM Campaign Report panel by selecting specific campaigns. This filter enables a focused analysis of individual or multiple campaigns, helping you assess their performance in detail.

The dashboard updates instantly upon selection, ensuring you always view the most relevant data based on your criteria.

Campaign StartDate

Last 30 days

CampaignName

(All)

Client involved - clients who participated in the campaign

OpenCount - clients who open the message

ClickCount - clients who clicked on the link in the message

Played (24h after) - clients who participated in the campaign and made at least one bet in casino or sportsbook within 24h after received the message

GGR (24h after) - GGR, from clients who participated in the campaign, within 24h after received the message

Turnover (24h after) - Turnover, from clients who participated in the campaign, within 24h after received the message

How to Use:

This panel provides a detailed overview of your campaign's performance. It measures engagement and financial outcomes by analyzing metrics like client involvement, message interactions, and revenue generated within 24 hours of a campaign. This tool is invaluable for assessing the impact of specific marketing strategies and optimizing future campaigns.

- Use the **Clients Involved**, **Open Count**, and **Click Count** metrics to assess how effectively your campaign captured client attention.
- Evaluate the **Clients (24h after)** and **GGR (24h after)** metrics to measure the campaign's short-term financial returns and player engagement.
- Examine how campaigns differ in their ability to drive client action and generate turnover within the reporting period.
- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

**Pro Tips:**

- Use the **Clients (24h after) %** metric to identify campaigns with strong engagement and replicate similar strategies for your most active client segments.
- Analyze patterns in **Open Count** and **Click Count** to pinpoint optimal messaging times and refine your communication style for better engagement rates.
- Campaigns with high **Turnover (24h after)** but low **GGR (24h after)** may need adjustment. Consider tailoring odds or incentives to balance profitability with engagement.
- Group campaigns by type (e.g., promotions vs. loyalty bonuses) and compare their effectiveness in driving **Clients (24h after) %**. This helps identify which types resonate best with your audience.
- Campaigns with low engagement or high **Clients Involved** but low **Open Count** may indicate issues with messaging or targeting. Use these insights to adjust your audience segmentation.

6.8 BONUSES

This section is available for **Advanced** and **Premium** payment plans and provides detailed insights into bonus costs, performance, and their contribution to overall GGR.

6.8.1 Filtering

On the "**Bonuses**" tab, you can filter data within a specific range by selecting from predefined periods such as '**Last 30 days**' or customizing the range by choosing specific days, weeks, or months and their durations.

The dashboard updates instantly upon selection, ensuring you always view the most relevant data based on your criteria.

6.8.2 Panels and Metrics

Panel Name	Description	Metric	Formula	Additional explanations (optional)
------------	-------------	--------	---------	------------------------------------

Bonus cost €. All bonuses	The table with metrics for all bonuses: - Awarded Amount. - Bonus Cost. - %of GGR. aggregated by Product and Bonus Types during the reporting period. SportsBook Cost / Bonus Cost - The amount of money received to the real balance after fulfilling the bonus conditions. The client can withdraw this money. Includes only: Wagering (Manual/Deposit) and CashBack bonuses. Free bets and Boost Bonuses are already included in GGR (in winnings).	Awarded Amount	SUM(Amount)	The sum of all bonuses awarded to clients in Casino and Sports Book during the reporting period.
	Casino Cost / Bonus Cost - The amount of money received to the real balance after fulfilling the bonus conditions. The client can withdraw this money. On this chart only Wagering (Manual/Deposit), SkillGames, and CashBack bonuses are present. Free spins and Boost Bonuses are already included in GGR (in winnings).	Percent of GGR	SUM(BonusCost)/SUM(GGR)*100%	% of the bonus cost from the total GGR

Bonus cost €. All bonuses					€ 231,535 SportsBook cost € 563,029 SportsBook GGR
Products	BonusType	AwardedAmount	BonusCost	Percent of GGR	€ 437,999 Casino cost € 2,496,887 Casino GGR
Sportsbook	Boost Bonus	0	2,839	0.5%	
	Free Bet	411,034	228,696	40.6%	
	Total	411,034	231,535	41.1%	
Casino	Cashback	0	25,740	5.3%	
	Deposit Wagering Bonus	364,539	204,737	8.2%	
	Freemspin	0	106,941	4.3%	
	Manual Wagering Bonus	208,562	100,581	4.0%	
	Total	573,101	437,999	17.5%	
Grand Total		984,134	669,534	21.9%	

How to Use:

This panel provides a comprehensive view of bonus metrics, including Awarded Amount, Bonus Cost, and % of GGR. Use this panel to analyze the distribution and efficiency of bonuses across different types (e.g., Free Spins, Cashback).

- Click on the  icon near a column header to sort data in ascending or descending order. This helps prioritize or analyze data based on specific metrics (e.g., sorting by registration numbers or percentages).
- The  option allows you to reverse the order of columns in the table. For example, instead of viewing data from the earliest to the most recent period (e.g., months or years), you can instantly flip the order to display the most recent periods first. This is especially useful when analyzing recent trends or prioritizing the latest data for review.

Pro Tips:

- Focus on bonus types with high percentages of GGR to assess their profitability and impact on customer retention.
- Watch for bonus costs that are disproportionate to GGR, indicating potentially inefficient bonus strategies.
- Highlight bonus types with low costs but high customer activity to maximize return on investment.

**Bonus Cost
(€) by Date**

Visualizes bonus costs split by type and aggregated by date.

Bonus Cost
by Date

SUM(BonusPa
idAmount)

--

How to Use:

This panel visualizes the distribution of bonus costs over time. Each bar represents a specific day, split by bonus type.

- Analyze the daily breakdown of bonus costs to spot high-cost periods or promotional spikes.
- Use the color coding to compare bonus types across dates.
- Click on a bar segment to isolate a specific bonus type and see its details.

Pro Tips:

- Use historical data to plan future campaigns during periods with lower bonus costs.
- Compare bonus costs over time to identify patterns, such as higher costs during holidays or weekends.

All bonus details €	The table with metrics: • DepositINAmount • UnfrozenAmount • BonusCost • BonusCost (% from total) • Players Aggregated by Partner Bonus ID, PartnerBonus Name, BonusType, and Product Name during the reporting period.	Deposit IN Amount	SUM(RealAmount)	The sum of all deposits that clients deposited to participate in the Wagering bonuses program.
		Unfrozen Amount	SUM(Unfrozen Amount)	The rest of the money from the deposit that the client made to receive the bonus. The client receives this amount to his real balance after fulfilling the bonus conditions.
		Bonus Cost	SUM(BonusPaidAmount)	--
		Bonus Cost (% from total)	SUM(BonusCost) / SUM(GGR)	The proportion of bonus costs relative to the total Gross Gaming Revenue (GGR) during the reporting period.
		Players	COUNT(DISTINCT ClientID)	The number of clients who have the <u>Bonus Result Date</u> in the reporting period.

How to Use:

This panel provides a detailed table of bonus metrics, such as Deposit IN Amount, Unfrozen Amount, Bonus Cost, and Bonus Cost (% from total), aggregated by bonus type, partner ID, and product.

- Use the filter options to narrow your analysis by partner, bonus type, or product.
- Review Deposit IN Amount to understand the initial player contributions for each bonus.
- Compare Bonus Costs and Unfrozen Amounts to evaluate how efficiently bonuses are utilized.

Pro Tips:

- Identify which partners deliver the most effective bonuses by analyzing their metrics in the table.
- Bonuses with high Deposit IN Amounts may indicate higher player engagement and profitability.
- Use the **"Players"** metric to identify bonuses attracting the highest number of unique players.
- Compare Bonus Costs (% from total) across products to adjust promotional strategies for Casino or SportsBook.

**General Pro Tips Across Panels:**

- Always look at related metrics together. For example, when analyzing deposits, also review retention rates and payment system performance to get a full picture.
- Leverage filters (date ranges, traffic sources, campaigns) to tailor your analysis for specific timeframes or segments.
- Compare current data against historical performance to identify trends and anomalies.
- Use real-time insights, such as spikes in withdrawals or changes in bet volume, to adjust strategies promptly.
